8. Attribution Decision & Escalation Detail

Attribution Outcome: **UNATTRIBUTED** (30.0 pts, UNATTRIBUTED) | **Method:** UNRESOLVED
Formal Explanation: Insufficient evidence to reliably attribute shared account 'radiology_shared' (Top candidate Dr. Priya Menon achieved only 30.0/100 points, threshold 60 required). Reason: Expired authorization.
Baseline Comparison: Baseline Rule assigned **UNATTRIBUTED** (0.0% confidence; User: None).

Escalation Priority: **HIGH** | Trigger Category: UNRESOLVED_ACTION | Current Queue Status: UNATTRIBUTED
Recommended Review Action: Verify physical workstation badge tap or departmental sign-in sheet.

9. Human Adjudication & Cryptographic Chain

Compliance Reviewer: UNASSIGNED | Decision: PENDING_REVIEW | Date: N/A
Investigator Notes: Awaiting compliance officer review.
Cryptographic Chain Verification: **VERIFIED_VALID** (Record ID: AUDIT-000001 | Hash: 1afeb1eb70efb91e3c5fcd34...) CHAIN_VALID

10. Mandatory Ethical Governance & Academic PoC Disclosures

- 1. **Non-Punitive Attribution:** Machine attribution represents probabilistic correlation of system telemetry and does not establish legal intent or disciplinary fault.
- 2. **Telemetry Limits:** Network and device identifiers are supporting evidence only and do not constitute independent identity verification.
- 3. **Mandatory Escalation:** All ambiguous or unverified clinical actions mandate independent investigation by authorized hospital compliance personnel.
- 4. **Synthetic Data:** All clinician identities, shared accounts, and logs in this dossier are deterministically simulated. No real patient PII is present.
- 5. **Regulatory Scope:** This academic prototype is not certified under HIPAA Security Rule (45 CFR § 164.312), FDA 21 CFR Part 11, or ISO 27001 standards.
